

## Personal Data Assistants (PDA)

*"the old fashioned way"*

Over the past several months, Dairy One and DRMS have introduced new reports that producers can make a regular part of their reports package. Starting in February you will begin seeing another new report, the **DHI 419** Pocket Report and Action Lists.

The **DHI 419** provides a "checkbook size" list of all cows in the herd with fresh date, bred date, reproduction code, times bred (Xs), % Relative Value (%RV) and fat corrected milk (FCM) for each cow. Cows can be listed in cow number or barn name order. The following Action Lists are provided after the listing of all cows and can be ordered by Cow ID (name or number) or by date: Cows to Calve, Cows to Breed, Cows to Preg Check, and Cows to Dry Off. The report is designed to be folded and stapled to achieve the size of a checkbook, complete with a plastic protector to slide it into. The report is updated each month as you test and receive new data.

\*Relative Value (RV): The difference between the cow's 305-2X-ME production for milk, fat and protein and the current average of the herd. A cow with a RV of 100 would be an average cow in the herd. This gives a way to compare cows to each other on a more equal age basis.

\*Fat Corrected Milk (FCM): Adjusting the pounds of milk to a standard fat test. Usually adjusted to 3.5% FCM. This is calculated as 3.5% FCM = (Milk lbs. X .432) + (Fat lbs. X 16.216). Some people like this as a way to place value on cows with exceptional component production.

Herds likely to be interested in this option do not use DC305, Scout, PCDART or other herd management software and are interested in cow-side information as well as "to do" lists. It should be pointed out that this option includes only cows and not heifers.

The price for this option is 3¢ per cow per test.

If this type of report is what you like and need there are a couple of other options that are new and worth a look.

There is a revised **DHI-205 Special List Breeding Package** that includes Cows to Breed, Preg. Check, Calve, Turn Dry, High SCC, Low Cows, and Fat/Protein Inversion). The form size changed to make it "checkbook" size. The report is intended to be folded, stapled and inserted into a plastic binder (provided the first test this report is requested). This option is only action lists and unlike the 419 above does not have a complete listing of cows.

These reports are also available in full size - one list per sheet (DHI-502-505) or a letter size pocket format (DHI-517). **NOTE:** Heifers will appear on the To Breed, Preg Check, and Calve lists only if the herd is enrolled on Option 214 (Heifer Management).

**CHART 3: More examples of DHI-205 Special List Breeding Package**

The **DHI 519 Pocket List - All Cows with Reproduction** lists all cows in the herd in a pocket (checkbook size) report. Option 60 (Cow Identity) determines if the cow index or cow barn name is printed. The report also lists DIM (days in milk), Milk (current test day milk), Cur SCC (current SCC as linear score), % RV, Date Bred and Mgmt Date (upcoming date to Calve, Breed, Dry or Preg Check).

**CHART 4: DHI 519 Pocket List - All cows with Reproduction.  
Lists all cows in a "checkbook" size report.**

In summary: three new options allow you to choose reports in a pocket check-book format that can be stapled and held in a plastic sheath for use at cowside.

**DHI-419** combines a list of the whole herd as well as action lists.

**DHI-205** is an action list report that includes special lists indicating problems with performance like high scc.

**DHI-519** lists the whole herd with information about reproductive status of the cows.

Dairy One customers not using software will receive the DHI-419 in February.
